机械手如何选型(特殊案例另外分析)

How to select the manipulator (special case analyzed individually)

手臂行程(以成品臂为例)

A值: 射嘴中心到注塑机头板的垂直距离;

B值: 注塑机头板尺寸到安全门的最高值;

C值: 注塑成品(含治具)所需要的成品空间,

机械手所需行程 $\geq A+B+C$

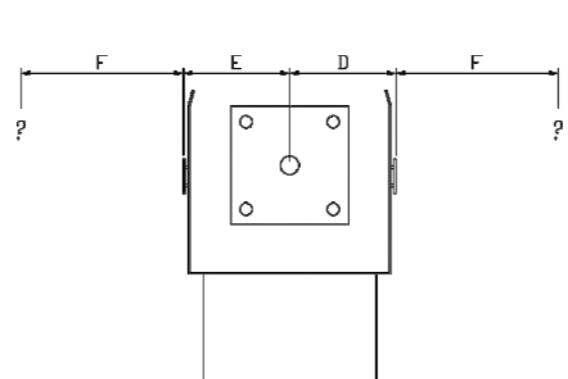

Arm stroke(Arm for finished product e.g.)

A value: vertical distance from nozzle center to the surface of fixed platen

B value: vertical distance from the surface of fixed platen to the highest point of safety door;

C value: the required space for successful taking-out of injection molded finished product(including jig)

Arm stroke (Vertical stroke) $\geq A+B+C$

横出行程

D或E值: 射嘴中心到前安全门(电脑板侧)或后安全门

(电脑板另侧)的垂直距离;

F值: 产品在安全门外处理所需的空间(如人员操作空间, 输送带

所占的空间或是特殊工装所占用的空间等等)

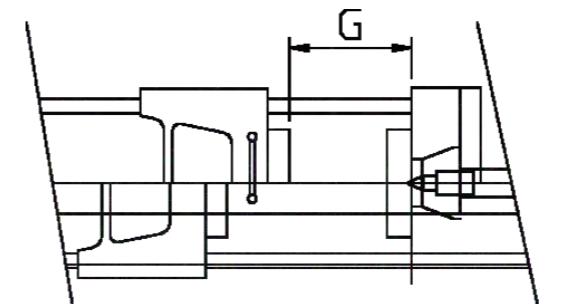

机械手横出所需的行程 $\geq D+E+F$

Traverse stroke

D or E value: Vertical distance from nozzle center to front or rear safety door;

F value: the outward space required for product processing from safety door handle;

Traverse stroke $\geq D+E+F$

引拔行程

G值: 埋模面到模具分型面的最大距离

机械手引拔行程 $\geq G$

Crosswise stroke

G value: The maximum distance between the buried die surface and the parting surface of the die

Crosswise stroke $\geq G$
